

CALLING ALL LITTLE SCIENTISTS!

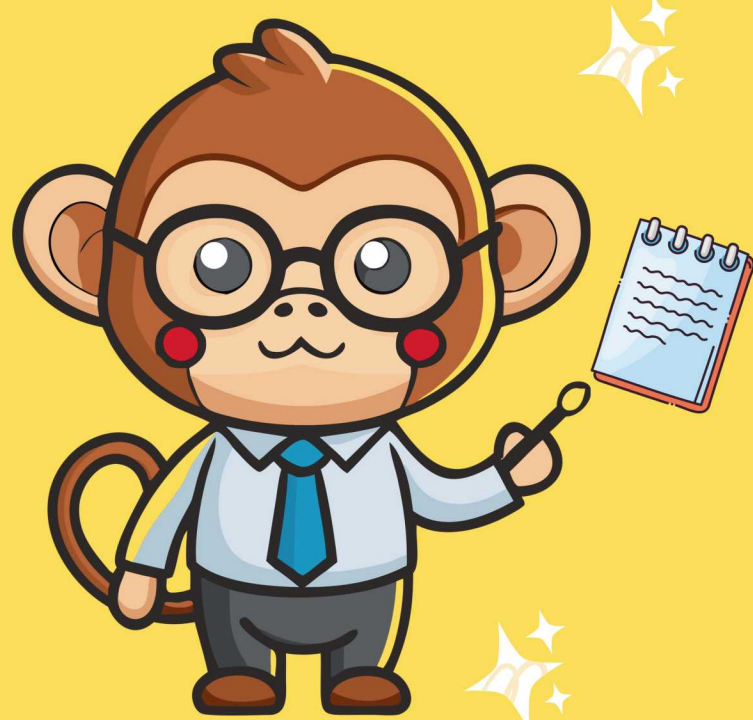

HELP US RESEARCH NEW WAYS TO DETECT MIDDLE EAR INFECTIONS

OtoNexus Medical Technologies is creating a new device that may help doctors quickly and accurately check middle-ear infections. This research study helps us learn whether an ear infection may be viral or bacterial, information that may guide future care.

WHAT HAPPENS IN THE STUDY:

- A doctor will take a few measurements inside your child's ear.
- The device uses photos, video, and ultrasound signals to evaluate the ear.
- The exam only takes a few minutes.
- Results from the device will not be used for medical treatment today.

WE ARE INVITING CHILDREN TO HELP US TEST THIS INVESTIGATIONAL DEVICE

Because this is a prototype device, a parent or guardian must sign an informed consent. **Families who participate will receive compensation.**

ASK YOUR DOCTOR TO LEARN MORE OR TO JOIN THE STUDY.
